
X
Features
A_0
Input-space graph
L_{A_0}
F_0
Spectral coordinates
Build once
W_0
Fusion graph from F_0
Frozen anchor
$H = F_0$ or $U = \mathrm{rowunit}(F_0)$
Ordinary SSC
Linear fusion
E1
Relative edge tolerance
E2
Fixed tangent constraints
E3
Frozen neighbor hinges
One objective per run
Matched SC clusters H under the same panel
G and declared rounding input Q
Original: $Q = G$
Angular: $Q = \mathrm{rowunit}(G)$
K-means
Cluster assignments
